

FEDERDRUCK

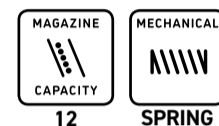

Vor jedem Schuss ziehst du den Schlitten nach hinten und spannst so die Feder. Dann löst du den Abzug aus, der die Feder freigibt. Druck entsteht, und eine Kugel verlässt den Lauf mit bis zu 36 m/s (130 km/h).

CO2

Hier ist CO2, das Gas für den Antrieb. Allerdings füllst du keinen Tank, sondern setzt eine mit CO2 gefüllte Kapsel (12 g) ein. Unsere so angetriebenen Airsoft-Modelle schaffen eine Energie von bis zu zwei Joule und damit eine Geschwindigkeit von 140 m/s (500 km/h).

ELEKTRISCH (AEG)

Auch elektrisch angetriebene Modelle sind mit einer Feder ausgestattet. Du spannst sie aber nicht per Hand - das übernimmt ein kleiner, durch Batterien oder Akku angetriebener Motor. Daher kannst du schneller hintereinander schießen.

GAS

Airsoft-Waffen mit Gasantrieb nutzen den Druck von Treibgas, um die Kugeln aus dem Lauf zu schießen. Das Gas füllt du aus einer externen Gasflasche in den Tank, der im Magazin sitzt. Sind sie mit Gas-Blowback ausgestattet, imitieren sie die Schlittenbewegung einer echten Waffe: Du löst den Abzug aus, das Gas treibt die Kugel aus dem Lauf und erzeugt einen Rückstoß. Gleichzeitig lädst du so automatisch die nächste Kugel nach (Repetiervorgang).
